

Prepare data and GPU
Initialize states

Host control
Launch search batch

GPU: B independent blocks; one trajectory per block

Choose by phase

Current selection
Best selection
Phase and hash

Construction
Add feasible item
Randomized score

Tabu phase
Additions, removals
and exchanges

Stagnation
or no admissible move

Empty restart
or perturbation of
own incumbent

Threads cooperate to evaluate exact gains
Select move and update coverage,
memory, incumbent, and stagnation

Synchronize summaries
Observe and record
best solution across blocks

Budget reached
Certify and return
best solution

Time remains:
next batch
